

ROGER HARMSTON

Roger Harmston is an Information and Communications Architect.

He has built on a broad understanding of systems technology, and the contexts in which they operate from a business process perspective. At the executive level, Roger works to help companies attain strategic and tactical excellence to match their corporate vision.

Out of the box thinking characterizes Roger's ability to specialize in creating environments for companies where people come first. His thirst for knowledge and understanding gives him an excellent listening ability.

As a Management Consultant, Roger has facilitated the change management and growth for international financial institutions, resource-based companies and Government Institutions.

Within information technology he has specialized in the conception, design, implementation, security and maintenance of heterogeneous networks. He has been Project Lead or Manager of Executive Information Management Systems for such organizations at McMillan Bloedel and the BC Ferry Corporation.

As a solutions oriented provider, every client's requirements have been approached to understand the overall context in which technology and systems can improve their access to information, and to help them leverage assets and people to create value for their clients and strong corporate foundations.

Life rules derived from a solid family oriented upbringing bring a multicultural, multi ethnic outlook. The personally held values of loyalty and trustworthiness are paramount.
